

Cellulite

Do you have places on your body where it is nearly impossible to lose that unwanted fat, cellulite? Are you looking for answers that do not involve surgery? If you answered yes to both of these, The Weight Pros can help.

Cellulite (superficial fat)

What is it and Why do I have it? Cellulite is a common but unattractive dimpling and puckering of skin. Cellulite is caused by a combination of fibrous bands and superficial fat. When superficial fat compartments become distended with fat, fibrous bands tether skin, and cause dimpling at points of attachment. Cellulite only occurs in areas where fibrous bands are present, such as the buttocks and thighs.

Cellulean - How does this cream work?

Cellulean is a topical cream that is a combination of 2% aminophylline and caffeine. Studies have shown, after using Cellulean, there is a reduction in the numbers of fat cells which in turn decreases cellulite. It works by penetrating deep into the skin where it causes body fat cells to shrink. The cream improves the skin's elasticity, while reducing the unsightly appearance of cellulite dimples. Optimal benefits are achieved when used in combination with a healthy well balanced diet and physical activity—but works on its own as well.

Are you always on the go and want to get rid of excess body fat?

Cellulean is easy to put on; you simply apply it as a moisturizing lotion twice a day, once in the morning and once in the evening. Cellulean dries quickly so you won't have to wait to get dressed. Cellulean absorbs deep into your skin and helps you get rid of your unwanted attractive fat.
